Man and The Garden

DAM AND EVE lived in the beautiful Garden of Eden, the first that was ever created, and so wonderful in its fashioning that gardeners ever since have been aiming to equal it, but without success. And ever since Adam and Eve were driven out of it and into the gardenless world, Man's great desire has been to make for himself again a little garden in which to spend his leisure moments, and surround himself with the beauties of Nature. And, as the centuries go by, this desire becomes stronger and more articulate, so that now we have men and women whose profession it is, through long years of study and training, to plan and plant out these gardens for us.

The Landscape Architect is now a necessary adjunct to every large Nursery where plants are grown by the thousands to supply the garden-thirsty folk all over the world. In the course of a few years, probably, no garden, whatever its dimensions or lack of them, will be planned without the expert assistance of the professional man. The cry is now all for the garden, whether it be the magnificent copy of Italian villas or but one plant of the homely "Golden Glow."

Not to be left behind in the advancing tide, but indeed to anticipate it, we have ensconced in our office a Department marked "Landscape Architecture," and have placed therein much time, money, and efficient workers. They announce their readiness and willingness to undertake the planning of your estate, no matter how large or how small it may be. And to encourage those timid folk who want a garden but don't know just exactly how to go about getting one, we have gotten out this little folder. If you will read it through carefully (it is not very long), you will find much of interest and benefit to you.

For several years it has been our good fortune to complete satisfactorily the making of some very important gardens in this state by designing and making plans, supplying the material, and supervising the planting. Having a proficient staff of experienced people, we are at all times prepared to give estimates on work of this kind, and can give as references many private customers

and institutions for whose grounds we have made plans and completed the work. Any one contemplating improvement in their home-surroundings should write us, and our representative will call, without obligation.

If you have not a garden already, may you join those who are so happily favored; if you have, may you let us make it even lovelier than it already is.

A Hardy Garden of Palisades Popular Perennials

An enjoyable Hardy Perennial Border along driveway

The Garden of Hardy Perennial Flowers

PERENNIALS not only make a permanent border that will increase in beauty each succeeding year without the expense of replanting, but, with the proper selection of sorts, guided by our practical knowledge, a display of bloom may be had in succession from April until November, long before and long after all tender plants of the Geranium, Canna and Coleus orders are effective. The latter are desirable for a few weeks only, and may be had at a relatively exorbitant expenditure, whilst Perennials, because of the ease with which they are grown and the amount of neglect they will withstand, to say nothing of their extremely reasonable cost, are indeed the ideal plants for the permanent garden.

The diagrams or plans as shown on pages 4 and 8 are **suggestions made to demonstrate and assist in making selections of hardy permanent effects, combining Perennials with Shrubs, Evergreens, Trees, etc.,** and, in each instance, we give the cost at which we will furnish the necessary plants as described, carriage paid to the nearest railroad station east of the Mississippi River.

Beds of this kind **should be planted either in the early fall or spring**; but, where it cannot be done until the summer months, we are prepared to furnish plants of Perennials grown in pots. These experience little change when shipped, arrive in good growing condition, and establish themselves readily.

In making the selection of kinds, we have named varieties that **succeed in almost any situation**, and have tried to arrange for succession of bloom throughout the summer and fall months, eliminating very early-flowering sorts.

A feature we strongly advise is **planting bulbs of Tulips and Narcissi** among the Perennial Plants for early spring flowering, and if planted deep (8 inches below the surface), the foliage can be cut off after flowering in spring and the bulbs, if left undisturbed, will flower each year before the Perennials.

As the varieties of Perennials selected and arranged for the different beds are merely suggestions, **changes can be made** suitable

to the purchaser's requirements, but these must be noted at the time of ordering.

We usually **allow about one plant to each square foot** of surface. By some this may be considered too close, but it is a good fault, for the first year at least, or before the plant becomes firmly established. It is easily corrected the following season by removing elsewhere or discarding some of the plants that have outgrown their space, increasing the number of those liked best by division of the roots.

It is little wonder that hardy plants are so popular, and we think Mr. Miller in the "Garden Magazine" **hits the nail on the head when he says:**

"But now that the treasures of the Far East are lavished upon us, we have hardy plants suitable for practically every purpose the most exacting gardener can conceive. And wherever we have any special object to accomplish, we ought to try nine times to find a hardy plant that will do the work, before falling back on a tender one. And this for two reasons: **First, hardy plants harmonize better with our climate and environment than tropical plants.** Second, as a rule, they are cheaper to maintain. And, in the long run, those effects which grow naturally out of the soil, and out of true economy, will be recognized as the most artistic."

PLATE A

All beds next to gravel walks or drives are outlined in solid lines. All beds next to grass walks or in lawn are outlined in dotted lines. The above beds are all drawn to a scale of 8 feet to 1 inch. For a bed similar in shape but double the size use a scale of 16 feet to 1 inch and double the quantity of plants; for one three times as large use a scale of 24 feet to 1 inch and order three times the quantity of plants, etc.

Autumn of 1912.

To the Recipient:-

The Fall of the year is the best season to make a garden, and where Hardy Perennials are used, with few exceptions, the earlier the better. They then get the benefit of a long season of growth, make a good system of roots and become firmly established whilst the earth is warm to carry them safely through the Winter.

For customers' convenience we have recently compiled a booklet illustrating and describing different Perennial effects with ground plans showing the exact spot where each plant should go, and are enclosing you a copy along with our price list of Bulbs for Fall planting for your perusal. We recommend the planting of Bulbs at the same time in the hardy border for early Spring blooming effects.

If another copy of our general catalogue is required, we will gladly send you one upon request and would esteem it a favor if you will send us the name and address of a neighbor, who is likely to be interested in our literature and our goods.

Trusting we merit your further patronage and assuring you that any order placed in our charge will receive prompt personal attention.

Respectfully yours,

THE PALISADES NURSERIES, INC.

SHOWING LUXURIOUS RAMBLING ROCK-GARDEN EFFECTS PRODUCED BY OUR PERENNIALS

Plan Perennial Planting Now

THE Palisades Popular Perennials and Shrubs make the permanent gardening effects—the kind that assure a garden-feeling the year round. Plants that bloom and wither in a week or two at their respective seasons have a place, but return a minimum of compensation for the toil and care you devote to their planting and growth. With Perennials the conditions are diametrically opposite. You obtain a maximum compensation, one that every season enhances.

Ours it is to supply the Perennials and Shrubs which best suit your rockery and garden plans. We have the choice and facilities. Why not write now for our catalogue, and let it help you make the right selection for this year's planting? All correspondence promptly answered, and free advice given when desired. Personal interviews by appointment at reasonable distance without obligation. Write
